13. ABSTRACT (Maximum 200 words)
The research presented in this report has been directed to study the effects of mass injection into the flow upstream of a cavity to understand the weapon bay cavity's flow field and its aeroacoustics. The objective also was to control the development of upstream boundary layer, and therefore, to control the development of the shear layer over the cavity. Control of the shear layer has enabled us to significantly reduce or to fully eliminate the weapons bay's aeroacoustic interactions. This study was performed in a wind tunnel at several nominal Mach numbers between 0.5 to 1.8 and at unit Reynolds numbers up

APPENDIX A
Supersonic Data

Notes:

Solid plug indicates an injection plate with all holes filled.

All runs were conducted at a nominal Mach number of 1.75.

The Peak Amplitude and Peak Frequency are those of the greatest magnitude component of frequency spectrum.

In all supersonic runs the Peak Frequency and Peak Amplitude were measured by the dynamic pressure transducer near the cavity trailing edge.

Notes:

Crank refers to the probe using the rotating arm.

Straight refers to the probe used on the cavity center line.

The front probe position refers to those probe traverse locations at the cavity leading edge. The back probe position refers to those probe traverse locations at the cavity trailing edge.

Probe horizontal position is measured from the cavity centerline.

Probe vertical starting offset must be added to the probe height tabulated to find the true height.

Notes:

Location refers to the dynamic pressure transducer location at which the Peak Amplitude and Peak Frequency were measured. The dynamic transducer located near the leading edge is the front location and the dynamic transducer located near the trailing edge is the back location.

Notes:

Location refers to the dynamic pressure transducer location at which the Peak Amplitude and Peak Frequency were measured. The dynamic transducer located near the leading edge is the front location and the dynamic transducer located near the trailing edge is the back location.
